J. Mol. Biol. 231:196-204 (1993).
I. Mol. Biol. 231:196-204 (1993).
I. FUNCTION: La protein plays a role in the transcription of RNA polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts (By similarity).

Polymerase III transcripts (By similarity).
I. SUBCELIULAR LOCATION: Nuclear (Probable).
I. DEVELOPMENTAL STAGE: Barely detectable in stage I/II occytes, accumulate in stage III/IV occytes, then exhibit a roughly accumulate in stage III/IV occytes, then exhibit a roughly

                                                                                                                                                                                                                                                                                                                                                                                                 FUNCTION: La protein plays a role in the transcription of RNA polymerase III. It is most probably a trually all nascent factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor form of RNA polymerase III transcripts including tRNA and 4.5S, 5S, 7.
                                                                                                                                                                                                                                                                                                                               PTM: Phosphorylated (By similarity). SIMILARITY: Contains 1 RNA recognition motif (RRM) domain.
                                                                                                                                                                                                                                                                                                                                                           SUBCELLULAR LOCATION: Nuclear (Probable).

-!- FUNCTION: La protein plays a role in the transcription of RNA
polymerase III. It is most probably a transcription termination
factor. Binds to the 3' termini of virtually all nascent
polymerase III transcripts. It is associated with precursor for
of RNA polymerase III transcripts including tRNA and 4.55, 55, ...
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Topfer F. SUBUNIT: Interracts with DDX15.
SUBCELLULAR LOCATION: Nuclear (Probable).
PTM: PHOSPHORYLATED. THE PHOSPHORYLATION
C-TERMINAL PART OF THE PROTEIN.
PTM: The N-terminus is blocked.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FUNCTION: La protein plays a role in the transcription of RNA polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor for RNA polymerase III transcripts including tRNA and 4.58, 58,
                                                                                                                                                                                                                                                                                                                                                                                                                                                      DISEASE: Sera from patients with systemic lupus erythemato often contain antibodies that react with the normal cellul La protein as if this antigen was foreign.
SIMILARITY: Contains 1 RNA recognition motif (RRM) domain.
                                                                                                                                                                                                                                                                                                                                                                                           SWISS-PROT entry is copyright. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TISSUE=Pituitary; MEDLINE=89207037; PubMed=2468131; Chan E.K.L., Sullivan K.F., Tan E.M.; "Ribonucleoprotein SS-B/La belongs to a protein family with consensus sequences for RNA-binding."; Nucleic Acids Res. 17:2233-2244 (1989). -I- FUNCTION: La protein plays a role in the transcription of RNA polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor forms of RNA polymerase III transcripts including tRNA and 4.55, 55, 75, and 7-2 RNAs.	SSB. SSB. SSB. Bos taurus (Bovine). Bos taurus (Bovine). Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
